

NayaHR — Pricing Strategy & Market Comparison

How to price NayaHR for Indian SMB clients, what the market charges, and how to quote a client with healthy margins.

Prices in ₹, per employee per month (PEPM), **excluding 18% GST** unless noted. Last updated: July 2026 — re-check competitor pages before quoting.

1. The market — what comparable HRIS charge (India, 2026)

Product	Segment	Price (PEPM)	Payroll	Setup / implementation	Notes
greytHR	SMB	~₹30–70 (Pro ~₹149 @100) + base fee	Included/strong	Low / self-serve	Cheapest for small teams; payroll-first
Zoho People	SMB–Mid	₹50 → ₹100 → ₹165 → ₹230	Add-on ₹33/emp	Low / self-serve	HR only; free for 5 employees; payroll is extra
Zoho Payroll	SMB	₹33/emp (or ₹1,000/mo for 25)	—	Low	Statutory compliance add-on
Keka	SMB–Mid	₹83–₹180	Included	₹25k–₹1L + 2% setter, quarterly min	Popular mid-market; pricier once fees stack
Darwinbox	Enterprise	~₹350 (~\$5 @100, \$3 @1,000)	Included	\$5k–\$50k, 4–9 months	Custom; min ~500 employees; not an SMB option

What this tells us (the strategy anchors): - The **SMB sweet spot is ₹50–₹150 PEPM**. greytHR/Zoho anchor the low end; Keka the middle; Darwinbox is a different (enterprise) league. - **"All-in" is rare and valuable**. Zoho charges payroll separately; Keka/Darwinbox pile on **implementation fees**. NayaHR bundling *everything* (Core HR + Payroll + Recruitment + Performance + Time off + AI) with **no setup fee** is a genuine differentiator. - **AI-native is unique** at this price point — none of the SMB incumbents lead with an assistant that *does the work*. - Everyone adds **18% GST**; most enterprise tools hide **implementation + support** costs. Simplicity is a selling point.

NayaHR's lane: win **Indian SMBs (10–200 employees)** against greytHR / Zoho / Keka — *not* Darwinbox. Compete on **all-in value + AI + zero setup friction**, priced competitively, not cheapest.

2. NayaHR pricing model (recommended)

One simple model: per-employee-per-month, everything included, no setup fee.

Plan	Employees	Price (PEPM)	Monthly minimum	Positioning
Starter	1 – 25	₹79	₹1,499/mo	Small teams getting organized
Growth	26 – 50	₹69	—	Scaling SMBs
Business	51 – 100	₹59	—	Established SMBs
Scale	101 – 200	₹49	—	Larger SMBs
Enterprise	201+	Custom (~₹39)	Custom	Volume deals

- **Everything is included** at every tier — no module add-ons, no payroll surcharge.
- **Monthly minimum (₹1,499)** on Starter keeps very small clients worth serving (a 12-person shop still pays ₹1,499, not ₹948).
- **+ 18% GST** on all prices.
- **No implementation/setup fee** — a headline advantage vs Keka (₹25k–1L) and Darwinbox (\$5k+).

Why these numbers: all-inclusive at ₹49–79 undercuts **Zoho People Pro (₹100) + Payroll (₹33) = ₹133** and **Keka (₹83–100)**, sits near **greytHR**, and beats everyone on "one price, everything in, AI included, live in days."

3. Margins — why this is highly profitable

NayaHR's cost to serve a client is very low because infrastructure is shared and mostly fixed:

- **Fixed platform cost (total, all clients): ~₹4,000–5,000/month** — Vercel Pro (~₹1,700) + Neon (~₹1,000–2,000) + email + misc. *This does not grow per client*; it's covered by your **first ~3 clients**.
- **Variable cost per client: ~₹5–10 per employee/month** — Anthropic AI usage + payment-gateway fees (~2%) + a shrinking share of infra as you scale.
- **Clerk is free** to ~50,000 users, so auth adds nothing for a long time.

Result: - **Contribution margin per client: ~80–92%** (revenue minus direct variable cost). - Past the first ~3 clients (who cover the fixed nut), **~85% of every new client's revenue is margin**. - ⚠️ Your **real cost is people time** — onboarding and support — not servers. Price and staff so one person can support many clients; that's what protects *net* margin.

4. Example quotes (what to put in front of a client)

Assumes variable cost ≈ ₹8/employee/mo (AI + gateway + infra-at-scale). "Contribution" = monthly revenue – variable cost, before the shared fixed platform cost and your time.

Client	Plan	PEPM	Employees			Variable cost	Contribution	Margin
Boutique firm	Starter	₹79	15	₹1,499 (floor)	₹17,988	₹120	₹1,379	92%
Growing SMB	Growth	₹69	40	₹2,760	₹33,120	₹320	₹2,440	88%
Established	Business	₹59	80	₹4,720	₹56,640	₹640	₹4,080	86%
Larger SMB	Scale	₹49	150	₹7,350	₹88,200	₹1,200	₹6,150	84%
Volume	Enterprise	₹39	300	₹11,700	₹1,40,400	₹2,400	₹9,300	79%

(Add 18% GST to the client-facing figure: e.g. the 80-employee client pays ₹4,720 + ₹850 GST = ₹5,570/mo.)

5. How to quote a client (quick formula)

1. Pick the tier for their employee count.
2. Monthly price = max(employees × tier PEPM , tier minimum)
3. Add 18% GST → that's the client-facing monthly number.
4. Annual price = monthly × 12, then apply the annual discount (below).

Example: 60 employees → Business tier (₹59). 60 × ₹59 = **₹3,540/mo** + GST ₹637 = **₹4,177/mo**, or **₹42,480/yr** (before annual discount).

6. Discounts & levers (use deliberately, protect the floor)

- **Annual prepay** → "2 months free" (≈17% off). Improves cash flow and retention; make it the default recommendation.
- **Founding-customer discount:** 30–40% off for your **first 5–10 logos**, locked for 12–24 months, in exchange for a testimonial/case study and a reference call. Early logos > early margin.
- **Volume:** the tier PEPM already steps down; for 200+, quote custom (~₹35–39) but **don't go below ~₹35 PEPM or ₹1,000/mo** — below that, support time isn't worth it. That's your **walk-away floor**.
- **What NOT to discount:** the setup fee (there isn't one — that's the pitch). Don't invent one to "give it away."

7. Positioning cheat-sheet (say this in the room)

- **vs Zoho:** "One price, payroll included — no add-ons to bolt on."
- **vs Keka / Darwinbox:** "No ₹25k–₹1L implementation fee and no 4–9 month rollout — you're live in days."

- **vs everyone:** "AI-native — an assistant that actually runs tasks, not a chatbot."
 - **Anchor high, land right:** show the all-in value first (what they'd pay for Zoho People + Payroll + an ATS + a performance tool separately), then your single number looks like a steal.
